

PNEUMATIC TRAILERS

DRY BULK

PNEUMATIC 1680 R MODEL

Designed primarily to haul food-grade products such as flour, the 1680 4-hopper is the lightest pneumatic in the industry. The "R" model features a round rather than elliptical cross section, with several resulting benefits: reduced flexing of the trailer, enhanced work life, and fewer maintenance issues. Unlike the elliptical cross section of our competitor's model, which is always trying to become round, the Beall trailer is built round. Innovative design plus all-aluminum construction make this trailer supreme.

PNEUMATIC TRAILERS

DRY BULK

PNEUMATIC 1050 R MODEL

This 3-hopper design is used primarily in the cement industry. All-aluminum construction, air ride suspension and round cross section design combine to reduce maintenance and prolong the life of the trailer. The weight advantage over the competition improves your bottom line and offers a higher resale value.

Some specifications and features shown or mentioned on this data sheet are optional and only available upon request at extra cost. All specifications are subject to change without notice.
